Setting up reCAPTCHA for Contact and Custom Forms

Foxbright has added the ability to use Google reCAPTCHA with the contact form and custom forms. Google reCAPTCHA can be used as an alternative to Foxbright's default captcha questions.

For Foxbright to add reCAPTCHA to a website, the website will need to be registered with Google by the site owner (client). Once registered, Google will provide a **Site Key** and **Secret Key** for the website, which should be sent to support@foxbright.com to configure reCAPTCHA.

> ⊙ Google reCAPTCHA can be added to a website for free up to 1,000,000 'calls' (validations) per month. Google charges $1 per 1,000 calls in a month above 1,000,000.

Registering a Site for Google reCAPTCHA

Any Google account can be used to register reCAPTCHA. It is recommended to use a google account created for the district so that the registration isn't tied to a personal account. Many Foxbright clients have a Google for Education or Analytics Account and should use that Google Admin account to register reCAPTCHA. If analytics has been setup by Foxbright, a google account should be created for the district and used to register reCAPTCHA. Multiple domains can be registered for reCAPTCHA with the same account.

> ⚠ **Note:** Foxbright does not support Enterprise reCaptcha.

1. Visit the [Google reCAPTCHA registration](#) page. It is recommended to use a google account created for the district so that registration isn't tied to a personal account.
2. Provide a **label** for the website(s) being registered. This label if for internal account purposes only, it will not be displayed with forms on the website.
3. Choose the **reCAPTCHA type** being used for the service. Foxbright supports reCAPTCHA v3 & v2. reCAPTCHA v3assively validates the visitor and applies the reCAPTCHA badge to all pages. reCAPTCHA v2 applies the badge only to custom forms and contact forms and offers a format with a checkbox or an invisible badge which passively validates visitors. See [types of reCAPTCHA offered](#) for more information.
4. Add the domain(s) being used for this reCAPTCHA registration. Multiple domains can be registered with the same account.
5. Additional **Owners** can be added to the account if multiple email addresses should have access to the account settings or information.
6. Accept the reCAPTCHA Terms of Service and choose whether Google should send alerts about the website's traffic to the owners of the account.
7. Click the **Submit** button to complete registration.

Adding reCAPTCHA to a Foxbright Website

Once a website has been registered with Google, the following information from the account will need to be sent to support@foxbright.com to complete the reCAPTCHA integration:

- The type of reCAPTCHA used for the account (v3, v2 with checkbox, or v2 with invisible badge)
- The **Site Key**
- The **Secret Key**

Once this information has been provided, Foxbright staff can add the details to the website's settings and activate google reCAPTCHA.
